Dear Hiring Team at AlphaPet Ventures,

I'm excited to apply for the ERP Automation & AI Engineer role. With over 2 years of experience building automation-driven systems and LLM-powered applications at PwC, I bring a strong "Automation First" mindset and a focus on delivering measurable business impact through scalable, intelligent solutions.

In my current role, I design and deploy AI-driven workflows using LLMs, RAG, and microservices to automate complex processes such as audit workflows and incident management. I have built systems for automated classification, decision support, and ticket generation, while ensuring reliability through production-grade pipelines and cloud deployments. My experience working across APIs, distributed systems, and data pipelines aligns well with optimizing ERP-driven processes like Purchase-to-Pay and reducing operational friction.

I particularly enjoy analyzing end-to-end workflows, identifying root causes of inefficiencies, and building reusable automation services instead of one-off scripts. With hands-on experience in Python, system design, and event-driven architectures, I am confident in contributing to predictive monitoring, self-healing systems, and internal automation platforms.

What excites me about AlphaPet is the opportunity to rethink core business processes through automation and AI while working closely with cross-functional teams to deliver real, measurable improvements.

I am currently based in India and fully understand the location requirements. I am open to relocation and prepared to navigate visa processes where applicable.

Thank you for your time and consideration.

Best regards,
Pushkar Singh
