Dear Hiring Team at Bain & Company,

I'm excited to apply for the AI/ML Associate role within the Bain Capability Network. With over 2 years of experience building AI-driven systems and LLM-based applications at PwC, I bring a strong combination of technical expertise and problem-solving skills aligned with consulting-driven environments.

In my current role, I design and implement GenAI solutions using Python, RAG, and agent-based architectures to automate workflows and generate actionable insights. My work involves building scalable pipelines, integrating LLM APIs, and optimizing model performance through structured prompting and evaluation techniques. I have also developed systems that combine AI outputs with backend logic and APIs, ensuring reliability and business relevance.

I am particularly interested in translating business problems into AI-driven solutions-whether through ML experimentation, GenAI integration, or workflow automation. My experience aligns well with building POCs, improving model performance, and delivering practical, data-driven outcomes in dynamic environments.

Additionally, as a participant in the McKinsey Forward Program, I have strengthened my structured thinking, business acumen, and ability to communicate technical insights effectively - skills that are essential in consulting settings.

I am highly motivated to contribute to Bain's AI initiatives and collaborate with cross-functional teams to deliver impactful, scalable solutions.

Thank you for your time and consideration.

Best regards,
Pushkar Singh
