Dear Hiring Team at CANCOM,

I'm excited to apply for the AI/Fullstack Developer role at CANCOM. With over 2 years of experience building AI-driven applications and scalable microservices at PwC, I bring strong expertise in developing end-to-end GenAI solutions using LLMs, RAG, and multi-agent systems.

In my current role, I have designed and deployed agentic AI systems leveraging LangChain, semantic retrieval, and enterprise integrations to automate complex audit and incident workflows. I've built production-ready backend systems using Python and Java (Spring Boot), deployed on cloud environments (AWS/Azure), and integrated them with APIs and event-driven architectures to ensure scalability and reliability. Additionally, I have hands-on experience building AI-powered applications such as multimodal RAG assistants and intelligent monitoring platforms.

What excites me about CANCOM is the opportunity to work on end-to-end AI applications from ideation to production—while collaborating across AI, cloud, and infrastructure teams. I particularly enjoy translating GenAI capabilities into practical business solutions through POCs, automation, and scalable system design.

I am highly motivated to work in a dynamic, innovation-driven environment and contribute to CANCOM's digital journey. I am also open to relocation and comfortable working in international teams.

Thank you for your time and consideration.

Best regards,
Pushkar Singh
