Dear Hiring Team,

I'm excited to apply for the KI Engineer role focused on enhancing BlueSpice with advanced AI capabilities. With over 2 years of experience building LLM-driven systems and production-grade pipelines at PwC, I bring strong expertise in designing practical, high-impact AI applications.

In my current role, I develop agentic AI systems using LangChain, RAG, and semantic retrieval to automate complex workflows. My work involves optimizing LLM outputs for accuracy and reliability, building and maintaining production-ready pipelines, and integrating AI into enterprise systems with a strong focus on observability and performance. I also have hands-on experience with multimodal RAG systems, metadata-driven retrieval, and real-world use cases like intelligent chatbots and automated analysis tools.

What excites me about this role is the opportunity to work deeply on LLM applications within a product like BlueSpice - improving existing systems such as chatbots and RAG pipelines while building new agent-based capabilities. I particularly enjoy working at the intersection of data, knowledge systems, and AI, where thoughtful design directly impacts user experience and system reliability.

I am comfortable working in collaborative, open-source-oriented environments and value clean, maintainable, production-grade code. I am fluent in English and actively improving my German skills, and I am open to relocation and visa processes.

Thank you for your time and consideration.

Best regards,

Pushkar Singh
