Dear Hiring Manager,

I am excited to apply for the Senior AI & ML Engineer role at Nexthink. With hands-on experience building production-grade agentic AI systems and scalable microservices at PwC, I bring a strong foundation in LLM-powered applications, RAG pipelines, and cloud-native deployments aligned with your focus on AI-driven digital experience innovation.

In my current role, I have designed and deployed agentic GenAI solutions leveraging LLM orchestration, semantic retrieval, and multi-step workflows to automate complex enterprise processes. Alongside this, I have built and operated scalable backend systems using Spring Boot, AWS, Docker, and CI/CD pipelines, ensuring reliability and performance in production environments.

I am particularly drawn to Nexthink's mission of enabling proactive, AI-powered problem-solving at scale. I enjoy working across the full lifecycle of AI systems - from architecture and evaluation to deployment and monitoring - and contributing to collaborative, high-impact teams.

I would welcome the opportunity to contribute to Nexthink's AI initiatives and help build robust, scalable systems that enhance digital employee experiences.

Thank you for your time and consideration.

Sincerely,

Pushkar Singh
