Dear Hiring Team at OMMA, X,

I'm excited to apply for the AI/LLM Engineer role at OMMA, X. With over 2 years of experience building production-grade LLM applications and scalable backend systems at PwC, I bring strong expertise in designing end-to-end AI solutions that deliver real business impact.

In my current role, I design and deploy agentic AI systems using Python, LangChain, and RAG architectures to automate complex enterprise workflows. I have built production-ready pipelines with structured outputs, tool usage, and evaluation layers to ensure reliability, observability, and performance. Additionally, I have developed scalable microservices and integrated enterprise data sources via APIs, enabling secure, high-performing AI applications in cloud environments (AWS/Azure) .

My experience aligns closely with building AI-powered applications such as copilots, intelligent assistants, and decision-support systems. I focus strongly on LLM Ops best practices—evaluation, monitoring, versioning, and cost optimization—while ensuring robust handling of edge cases and system reliability. I also enjoy working across the stack, contributing to system design, backend services, and AI-driven user experiences.

Additionally, as a participant in the McKinsey Forward Program, I have strengthened my structured problem-solving and business thinking, allowing me to effectively bridge strategy and technical implementation—an aspect I find particularly compelling about OMMA, X's consulting-driven approach.

I am highly motivated to contribute to building enterprise-grade AI systems at OMMA, X and grow into a technical leadership role while working at the intersection of strategy and implementation. I am open to relocation and prepared to handle visa processes if required.

Thank you for your time and consideration.

Best regards,

Pushkar Singh
