Dear Hiring Team at SCHUNK,

I'm excited to apply for the Automation & AI-focused role at SCHUNK. With a background in Computer Science and over 2 years of experience building automation-driven systems and AI-powered workflows at PwC, I bring a strong foundation in designing scalable, system-integrated solutions.

In my current role, I analyze complex workflows and build end-to-end automation systems using APIs, microservices, and LLM-based solutions. I have developed intelligent pipelines for classification, decision support, and workflow orchestration, ensuring reliability, scalability, and measurable business impact. My experience working across distributed systems aligns well with orchestrating system-wide workflows and integrating across diverse platforms.

I am particularly interested in identifying automation potential, designing reusable solutions, and enabling teams through structured approaches and best practices. With hands-on experience in Python, REST APIs, and AI-based applications, I am comfortable bridging the gap between technical implementation and business needs while considering security, reliability, and maintainability.

What excites me about SCHUNK is the opportunity to contribute to innovative, real-world industrial solutions by combining automation, software, and AI. I am motivated to bring an "automation-first" mindset to improve processes and deliver tangible impact.

I am open to relocation and prepared to handle visa processes if required.

Thank you for your time and consideration.

Best regards,
Pushkar Singh
