Dear Hiring Team at SCOUTASTIC,

I'm excited to apply for the AI Engineer role at SCOUTASTIC. With over 2 years of experience building LLM-driven systems and scalable backend applications, I am passionate about leveraging state-of-the-art AI to create intelligent, high-impact products.

In my current role at PwC, I design and deploy AI-powered systems using Python, RAG, and agent-based architectures to automate complex workflows and generate actionable insights. I have built production-grade pipelines and intelligent systems for classification, summarization, and decision support, ensuring reliability and scalability in real-world environments. I also have experience developing backend systems and integrating APIs, aligning well with building and enhancing AI-powered platforms.

Additionally, I am a participant in the McKinsey Forward Program, where I've strengthened my structured problem-solving, digital, and leadership skills—complementing my technical background with a strong business-oriented mindset.

What excites me about SCOUTASTIC is the unique combination of AI and sports—using data and intelligence to transform scouting and decision-making. I enjoy working with cutting-edge AI tools, experimenting with new approaches, and building systems that not only automate but also “understand” and provide meaningful insights.

I am open to relocation and willing to handle visa processes if required.

Thank you for your time and consideration.

Best regards,
Pushkar Singh
