Dear Hiring Team at SIGNAL IDUNA,

I'm excited to apply for the AI-focused role in shaping next-generation customer interaction. With over 2 years of experience building LLM-driven systems and agent-based workflows at PwC, I bring a strong combination of technical depth and business-oriented thinking to design impactful AI solutions.

In my current role, I develop and orchestrate AI systems using RAG, LangChain, and multi-agent architectures to automate complex workflows and support decision-making. My work involves prompt engineering, designing evaluation pipelines for accuracy and reliability, and building production-grade systems that integrate with enterprise APIs and cloud environments. I have also worked on intelligent conversational and analysis systems where output quality, latency, and consistency are critical.

What excites me about this role is the opportunity to go beyond isolated AI features and design end-to-end, autonomous AI-driven processes—especially in conversational and voice-based systems. I enjoy translating business needs into scalable AI architectures, defining structured workflows, and continuously improving system performance while mitigating risks such as hallucinations and bias.

Additionally, I am a participant in the McKinsey Forward Program, which has strengthened my structured problem-solving, stakeholder communication, and ability to connect technical solutions with business value.

I am highly motivated to contribute to SIGNAL IDUNA's transformation journey and help build intelligent, reliable, and customer-centric AI systems. I am open to relocation and prepared to handle visa processes if required.

Thank you for your time and consideration.

Best regards,

Pushkar Singh
