Dear Hiring Team at sifamo GmbH,

I'm excited to apply for the Software Developer role at sifamo. With over 2 years of experience building scalable microservices and AI-driven applications at PwC, I bring a strong blend of software engineering and applied AI expertise.

In my current role, I develop production-grade systems using Spring Boot, cloud platforms, and APIs, alongside building LLM-powered solutions using RAG, LangChain, and agent-based architectures. My work focuses on designing systems that not only automate workflows but also support intelligent decision-making through AI integration. I have also built real-world applications such as intelligent monitoring platforms and multimodal AI assistants.

I am particularly excited about sifamo's focus on combining modern software engineering with AI and cognitive technologies. I enjoy working on end-to-end systems, collaborating with stakeholders, and continuously learning new technologies to drive meaningful impact.

Additionally, I am a selected participant of the McKinsey Forward Program, where I have further strengthened my problem-solving, digital, and leadership skills - helping me approach complex challenges with a structured and business-oriented mindset.

I am motivated to grow further in AI and cloud-native development and contribute to innovative, high-impact projects at sifamo. I am open to relocation and willing to handle visa processes if required.

Thank you for your time and consideration.

Best regards,

Pushkar Singh
