Dear Glow25 Hiring Team,

I'm excited to apply for the Automation-focused role at Glow25. With 2+ years of experience building production-grade automation systems and LLM-driven workflows at PwC, I specialize in reducing operational friction through scalable, reliable solutions.

In my current role, I design and deploy agentic AI systems and microservices that automate complex audit and incident workflows. I've built end-to-end solutions using APIs, event-driven architectures, and LLMs (RAG, LangChain) for tasks like classification, decision support, and workflow orchestration - always focusing on reliability, observability, and measurable business impact. Additionally, I've developed systems that automate incident triage and integrate seamlessly with tools like JIRA, demonstrating strong experience working across imperfect systems and APIs.

What excites me about Glow25 is the focus on applied automation in real-world operations. I enjoy identifying high-impact automation opportunities and turning them into maintainable, production-ready systems rather than one-off scripts.

I am open to relocation and fully aware of visa processes, and I'm comfortable navigating and coordinating all necessary work visa requirements if selected.

I'd love to contribute to building reliable, scalable automation systems at Glow25 and help reduce operational friction across teams.

Best regards,
Pushkar Singh
